

ECONOMY

Downtowns make up a small share of their city's land area, but have substantial regional economic significance. As traditional centers of commerce, transportation, education, and government, downtowns are frequently economic anchors for their regions. Because of a relatively high density of economic activity, investment in the center city provides a high level of return per dollar of economic input. Just as regional economies vary, so do the economic profiles of center cities - the relative concentration of jobs, economic activity, retail spending, tax revenue, and innovation varies among downtowns and center cities. Comparing the economic role of downtowns and center cities in the context of the larger city or region is useful in articulating their unique value, as well as for setting development policy going forward.

INCLUSION

Downtowns and center cities invite and welcome all residents of the region (as well as visitors from elsewhere) by providing access to opportunity, essential services, culture, recreation, entertainment, and participation in civic activities. Downtowns are inherently equitable because they enable a diverse range of users from across the region to access essential elements of urban life. These elements include high-quality jobs, essential services, recreation, culture, public space, and civic participation, among others. Though the specific offerings of each downtown may vary, their attributes (density, accessibility, diversity) enable a wide degree of access. Perhaps more importantly, downtowns are the places where we expect to experience the diversity of a region, where diversity is consciously sought out and welcomed.

VIBRANCY

Due to their expansive and dense base of users, downtowns and center cities can support a variety of unique retail, infrastructural, and institutional uses that offer cross-cutting benefits to the region. Many unique regional cultural institutions, businesses, centers of innovation, public spaces, and activities are located downtown. The variety and diversity of offerings reflect the regional market and density of development. As downtowns and center cities grow and evolve, the density of spending, users, institutions, businesses, and knowledge allows them to support critical infrastructure, be it public parks, transportation, affordable housing, or major retailers that cannot be supported elsewhere in the region.

IDENTITY

Downtowns and center cities preserve the heritage of a place, provide a common point of physical connection for regional residents, and contribute positively to the brand of the regions they represent. Whether from a historical event or personal memory, downtowns have intrinsic cultural value important to preserving and promoting the brand of the region. Downtowns and center cities offer a place for regional residents to come together, participate in civic life, and celebrate their region, which in turn promotes tourism and civil society. Likewise, the "postcard view" visitors associate with a region is virtually always an image of an attribute of the downtown.

RESILIENCE

Resilience is broadly defined as the ability of a place to withstand shocks and stresses. Because of the diversity and density of resources and services, center cities and their inhabitants can better absorb economic, social, and environmental, shocks and stresses than their surrounding cities and regions. The strengths are drawn from the diversity and economic prowess of downtowns and center cities equip them to adapt to economic and social shocks better than communities which are more traditionally homogenous. Consequently, they can also support the resiliency of the region, particularly in the wake of economic shocks that disproportionately affect less economically and socially dynamic areas. Similarly, downtowns and center cities are better positioned to make the investments to hedge against and withstand increasingly-frequent environmental shocks and stresses.
